

U.S. Application: 09/743,300
SUPPLEMENTAL AMENDMENT C AND REQUEST FOR A TELEPHONE INTERVIEW
Attorney Docket: 3535.010

IN THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Previously presented) A mineral wool product comprising:
 - a mineral wool body having first and second sides;
 - a glass fibrous web (3) provided on at least one side of said mineral wool body; and
 - a foamed coating (2) based on a siliceous material and containing at least one organic plastic coated on said glass fibrous web (3);wherein said glass fibrous web (3) is provided between said coating (2) and said mineral wool body (1)
wherein said mineral wool product is acoustically transparent.

2. (previously presented) The mineral wool product according to claim 1, wherein said product is obtained by a process comprising:
 - applying a foamed coating mass on a mineral wool body laminated with a glass fibrous web and
 - subsequent drying, wherein the coating mass comprises the following composition:
 - 20-40% (wt.) silica sol (40% (wt.) solid content SiO₂)
 - 10-25% (wt.) plastic dispersion
 - 1-5% (wt.) aluminum hydroxide
 - 0.5-2% (wt.) foaming agent
 - 0.05-1% (wt.) foam stabiliser
 - balance: water, and
 - optionally flameproofing agent and/or further additions.

U.S. Application: 09/743,300
SUPPLEMENTAL AMENDMENT C AND REQUEST FOR A TELEPHONE INTERVIEW
Attorney Docket: 3535.010

3. (Previously presented) The mineral wool product according to claim 1, wherein said glass fibrous web (3) is a glass wool mat.

4. (Previously presented) The mineral wool product according to claim 1, wherein said foamed coating (2) is at least one of electrically conductive and magnetically active.

5. (Previously presented) The mineral wool product according to claim 4, wherein said foamed coating further contains:

at least one of electrically conductive and magnetically attenuating substances.

6. (Cancelled)

7. (Currently amended) A mineral wool product comprising:
a mineral wool body having first and second sides;
a glass fibrous web (3) provided on at least one side
of said mineral wool body; and
a foamed coating (2) based on a siliceous material and
containing at least one organic plastic coated on said glass
fibrous web (3);
wherein said glass fibrous web (3) is provided between
said coating (2) and said mineral wool body (1)
wherein said mineral wool product is acoustically
transparent;

~~The mineral wool product according to Claim 1, wherein the weight per surface unit of said glass fibrous web (3) is 20 to 150 g/m².~~

8. (Withdrawn) A process for producing a mineral wool composite product, said composite material comprising:

a mineral wool body having first and second sides;

U.S. Application: 09/743,300
SUPPLEMENTAL AMENDMENT C AND REQUEST FOR A TELEPHONE INTERVIEW
Attorney Docket: 3535.010

a fiber mat (3) provided on at least one side of said mineral wool body; and

a foamed coating (2) based on a siliceous material and containing at least one organic plastic coated on said fiber mat (3);

such that said fiber mat (3) is provided between said coating (2) and said mineral wool body (1);

said process comprising:

applying a foamed coating (2) on the basis of a siliceous organic binder on a fiber mat lamination (3) of a mineral wool product, and

bursting the foam bubbles through drying under infrared heating

wherein said mineral wool product is acoustically transparent.

9. (Withdrawn) The process according to claim 8, wherein an application quantity of 100 g/m² to 500 g/m² of foamed coating mass is used.
10. (Withdrawn) The process according to claim 8, wherein a foam weight per liter of 100 g/l to 400 g/l is used.
11. (Withdrawn) The process according to claim 8, wherein said layer (2) is dried in a tunnel furnace.
12. (Withdrawn) The process according to claim 8, wherein a coating mass having the following composition is used:
20-40% (wt.) silica sol (40% (wt.) solid content SiO₂)
10-25% (wt.) plastic dispersion
1-5% (wt.) aluminum hydroxide

U.S. Application: 09/743,300

Attorney Docket: 3535.010

0.5-2% (wt.) foaming agent
0.05-1% (wt.) foam stabiliser
balance: water, and
optionally flameproofing agent and/or further additions.

13. (Withdrawn) A coating mass for the production of a mineral wood product having the following composition:

20-40% (wt.) silica sol (40% (wt.) solid content SiO_2)

1-5% (wt.) aluminum hydroxide

0.5-2% (wt.) foaming agent

0.05-1% (wt.) foam stabiliser

balance: water, and

optionally flameproofing agent and/or further additions,

wherein said coating mass comprises 10-25% (wt.) plastic dispersion

wherein said mineral wool product is acoustically transparent.

14. (Previously presented) The mineral wool product according to claim 5, wherein said electrically conductive and/or magnetically attenuating substances are selected from the group consisting of powdered carbon, carbon fibers, graphite, in particular expanded graphite, mu-metal, chromium dioxide, metal whisker, carbonyl iron.

15. (Previously presented) The mineral wool product according to claim 1, wherein said foam layer forming agents are selected from the group consisting of expanded graphite and pentaerythritol.

SUPPLEMENTAL AMENDMENT C AND REQUEST FOR A TELEPHONE INTERVIEW
Attorney Docket: 3535.010

16. (Previously presented) The mineral wool product according to claim 7, wherein the weight per surface unit of said glass fibrous web (3) is 40 to 80 g/m².

17. (Previously presented) The mineral wool product according to claim 7, wherein the weight per surface unit of said glass fibrous web (3) is approx. 60 g/m².

18. (Withdrawn) The process according to claim 8, wherein an application quantity of approx. 300 g/m² of foamed coating mass is used.

19. (Withdrawn) The process according to claim 8, wherein a foam weight per liter of approx. 250 g/l is used.

20. (Withdrawn) The process according to claim 8, wherein said layer (2) is dried in a tunnel furnace at temperature of approx. 260°C.

21. (Previously presented) The wool product according to claim 1 wherein the mineral wool product is a ceiling panel.

22. (Previously presented) The mineral wool product according to claim 1 wherein the foamed coating (2) is applied on the glass fibrous web by bursting the foam bubbles through drying.

23. (Previously presented) The mineral wool product according to claim 1 wherein the foamed coating is between a quantity of 100 g/m² to 500 g/m².
